DIGITAL LITERACY

PROJECT REPORT

Digital literacy is the ability to use digital tools and technology to find, understand, create, and share information safely and effectively.

NAME : VAISHNAVI JHA
REG NO. : 25MEI10030
BRANCH : MTECH CSE
YEAR : 1ST YEAR

COURSE CODE : CSE0001
DATE : 29-03-2026

INTRODUCTION

Today, being comfortable with technology is an important part of student life. This project helped me understand what digital literacy really means and how we use it in our daily activities. Through different tasks, I explored useful tools and platforms that can support learning and communication. I created an infographic to spread awareness about safe internet use, set up my profiles on platforms like GitHub and LinkedIn, practised coding on HackerRank, and also made a small quiz using Google Forms. Working on these tasks made me realize how important it is to use digital tools wisely and responsibly. Overall, this project helped me improve my skills and gave me a better idea of how to build a strong and professional online presence for the future.

TASK 1
INFOGRAPHIC ON DIGITAL LITERACY

For this task, I made a one-page infographic titled “Your Digital Life, Your Responsibility” using Canva. The main idea behind my design was to make students understand digital literacy in a simple and practical way. I included three main topics: understanding digital literacy, professional email etiquette, and staying safe online. I tried to keep the content short and clear so that anyone can easily read and understand it. In my infographic, I explained how digital literacy is important for using technology responsibly. I also added points about writing proper emails and following basic online safety practices like not sharing OTPs and avoiding unknown links. One difficulty I faced was adjusting all the content in one page without making it look too crowded. Overall, I enjoyed this activity because it helped me improve my creativity and taught me how to present information in a better way.

TASK 2
DIGITAL PORTFOLIO

For this task, I created my digital portfolio by making profiles on GitHub, LinkedIn, and Kaggle. These platforms are helpful for students to build their online presence and start learning new skills. On GitHub, I created my account and added a profile README with my basic details like my name, branch, and what I want to learn. It will help me upload and manage my projects in the future. On LinkedIn, I added my education details such as my college, degree, and expected graduation year. It is useful for connecting with others and learning about opportunities. I also created a Kaggle account, which I can use to explore data science and improve my skills step by step. This task helped me understand how important it is to have a professional profile online. In the future, I plan to keep updating these platforms regularly and use them to grow academically and professionally

TASK 3
PLATFORMS (CODING & COLLABORATION TOOLS)

For this task, I explored coding and collaboration platforms. I created an account on HackerRank and completed a beginner-level problem, which helped me understand the basics of problem-solving and coding practice. It gave me confidence to start learning programming and improve my logical thinking skills.

In addition, I created a Google Form titled “Digital Literacy Awareness Quiz” with five questions. The form included both multiple-choice and short-answer questions. I also linked it to a Google Sheet to collect responses. This helped me understand how to create surveys and manage data effectively.

These tools are very useful for academic purposes. Coding platforms help improve programming skills, while Google Forms can be used for quizzes, feedback collection, and data analysis. This task improved my practical knowledge of using digital tools.

TASK 4
EMAIL ETIQUETTE AND ONLINE BEHAVIOR

In this task, I learned about professional communication through emails and responsible behavior on social media. I wrote two formal emails — one requesting an extension for an assignment and another applying for a summer internship. While writing these emails, I focused on using a proper structure, including a clear subject line, polite language, and a respectful closing. This helped me understand how to communicate effectively in a professional environment. I also created a checklist of social media do’s and don’ts to understand how to behave responsibly online. It included points like maintaining a professional profile, using strong passwords, and avoiding sharing personal information. This activity made me more aware of how small actions online can impact our digital identity. Overall, this task helped me improve my communication skills and understand the importance of maintaining proper etiquette in both emails and social media

TASK 5
CYBERCRIME AWARENESS CASE STUDY & PREVENTION GUIDE

While doing this task, I explored different types of cybercrimes, especially UPI and online payment fraud. I didn’t realize before how common these scams are and how easily people can fall for them. Many frauds happen through simple tricks like fake messages, links, or QR codes that look completely real. What surprised me the most was that even small mistakes or a moment of carelessness can lead to serious problems. Making the case study and prevention checklist helped me understand these risks in a practical way. It also made me more aware of how important it is to stay alert while using digital platforms.
After this task, one habit I want to change is being more careful before clicking on links or sharing any information online. Overall, this task made me more aware and responsible as a digital user.

CONCLUSION

Working on this project helped me understand digital literacy in a much better and more practical way. I got to explore different platforms like GitHub, LinkedIn, HackerRank, and Google Forms, which showed me how useful they are for learning and building skills. I also became more aware of online safety and the risks of cybercrime. Creating the infographic, quiz, and profiles made the whole experience more interesting and interactive. Overall, this project not only improved my technical knowledge but also made me more careful and responsible while using the internet. It gave me confidence to use digital tools in a smarter way in the future.
